

LM2904Q

Automotive, Rail-to-Rail Output, Dual Operational Amplifier

GENERAL DESCRIPTION

The LM2904Q is a dual operational amplifier with internal frequency compensation. It is optimized for high voltage operation from 3V to 32V single supply or $\pm 1.5V$ to $\pm 16V$ dual supplies, and consumes only 440 μA quiescent current.

The LM2904Q features low power, low offset voltage and low bias current. The device can offer high open-loop voltage gain. It is well suited for various applications.

The device is AEC-Q100 qualified (Automotive Electronics Council (AEC) standard Q100 Grade 1) and it is suitable for automotive applications.

The LM2904Q is available in Green SOIC-8 and MSOP-8 packages. It is specified over the $-40^{\circ}C$ to $+125^{\circ}C$ temperature range.

FEATURES

- AEC-Q100 Qualified for Automotive Applications
Device Temperature Grade 1
 $T_A = -40^{\circ}C$ to $+125^{\circ}C$
- Support Single or Dual Power Supplies:
3V to 32V or $\pm 1.5V$ to $\pm 16V$
- Low Quiescent Current: 440 μA (TYP)
- Low Input Offset Voltage: $\pm 5.8mV$ (MAX)
- Low Input Offset Current: $\pm 10pA$ (TYP)
- Low Input Bias Current: $\pm 10pA$ (TYP)
- Minimum Input Common Mode Voltage: $(-V_S) - 0.1V$
- Open-Loop Differential Voltage Gain: 108dB (TYP)
- Gain-Bandwidth Product: 1.1MHz
- Unity-Gain Stable
- Available in Green SOIC-8 and MSOP-8 Packages

APPLICATIONS

Automotive Applications
Wearable Products
Temperature Measurements
Battery-Powered Systems
Sensors
Audio
Active Filters
Communications
Test Equipment

PACKAGE/ORDERING INFORMATION

MODEL	PACKAGE DESCRIPTION	SPECIFIED TEMPERATURE RANGE	ORDERING NUMBER	PACKAGE TOP MARKING	PACKING OPTION
LM2904Q	SOIC-8	-40°C to +125°C	LM2904QS8G/TR	1IWS8 XXXXX	Tape and Reel, 4000
	MSOP-8	-40°C to +125°C	LM2904QMS8G/TR	1IXMS8 XXXXX	Tape and Reel, 4000

MARKING INFORMATION

NOTE: XXXXX = Date Code, Trace Code and Vendor Code.

XXXXX

Green (RoHS & HSF): SG Micro Corp defines "Green" to mean Pb-Free (RoHS compatible) and free of halogen substances. If you have additional comments or questions, please contact your SGMICRO representative directly.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage Range, V_S ⁽¹⁾	-0.3V to 34V
Differential Input Voltage Range, V_{ID} ⁽²⁾	(+V _S) - (-V _S)
Input Voltage Range (Either Input)	
..... (-V _S) - 0.3V to (+V _S) + 0.3V	
Package Thermal Resistance	
SOIC-8, θ_{JA}	122.5°C/W
SOIC-8, θ_{JB}	69.2°C/W
MSOP-8, θ_{JA}	142.1°C/W
MSOP-8, θ_{JB}	85.8°C/W
Junction Temperature	+150°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (Soldering, 10s)	+260°C
ESD Susceptibility ^{(3) (4)}	
HBM	±6000V
CDM	±1000V

NOTES:

1. The network GND is the reference point for all voltage values, except for differential voltages and V_S when measuring I_{SC} .
2. Differential voltage is between +IN and -IN.
3. For human body model (HBM), all pins comply with AEC-Q100-002 specification.
4. For charged device model (CDM), all pins comply with AEC-Q100-011 specification.

RECOMMENDED OPERATING CONDITIONS

Input Common Mode Voltage Range	
..... (-V _S) - 0.1V to (+V _S) - 1.5V	
Operating Temperature Range	-40°C to +125°C

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

DISCLAIMER

SG Micro Corp reserves the right to make any change in circuit design, or specifications without prior notice.

DETAILED DESCRIPTION

The LM2904Q is a dual, high open-loop gain operational amplifier with internal frequency compensation. It is optimized for high voltage operation from 3V to 32V single supply or $\pm 1.5V$ to $\pm 16V$ dual supplies. The input common mode voltage range is from $(-V_S) - 0.1V$ to $(+V_S) - 1.5V$.

This LM2904Q makes it easier to implement all conventional operational amplifier circuits in a single-supply system, such as DC amplifier modules and transducer amplifiers. For instance, the device does not need extra $\pm 5V$ supplies to work with the interface electronics, as it can be easily operated on the 5V source that is common for digital systems.

Input Common Mode Voltage Range

The input common mode voltage range is from $(-V_S) - 0.1V$ to $(+V_S) - 1.5V$. Also, the voltage level at the inputs can reach V_S without damaging the device. If the users desire the correct phase at the output of the operational

amplifier, they need to make sure that at least one of the inputs is within the input common mode voltage range. If both of them are outside the input common mode voltage range, the state of the output will be undefined. However, if either input is below $-0.3V$, the input current should be limited and the output state will also be undefined.

Unity-Gain Bandwidth

The unity-gain bandwidth is the maximum supported frequency which can be amplified by an amplifier without distortion. The unity-gain bandwidth of LM2904Q is 1.1MHz.

Slew Rate

The slew rate is the time period for the output change when input signal is changed. The slew rate of LM2904Q is $0.35V/\mu s$.

APPLICATION INFORMATION

The LM2904Q can be widely used for various signal processing purposes.

Typical Application

The following circuit is an application of an inverting amplifier. To explain, the input is positive while the output is negative. However, if the input signal is negative, the output will be positive as well.

Figure 1. Application Schematic

The supply voltage range should always be larger than the input and the output range. The following example scales a signal with $\pm 0.5V$ to $\pm 1.8V$, which means that the $\pm 12V$ of the supply voltage is sufficient.

The following equations determine the voltage gain of the inverting amplifier circuit.

$$G = \frac{V_{OUT}}{V_{IN}} \quad (1)$$

$$G = \frac{1.8}{-0.5} = -3.6 \quad (2)$$

After setting the voltage gain, the value of the gain and feedback resistors should be determined as well. Since the operating current inside the circuit is in the mA range, the R_I and R_F should be at the level of k Ω . In this example, the R_I is 10k Ω and the R_F is 36k Ω .

$$G = -\frac{R_F}{R_I} \quad (3)$$
