

TPS382x Voltage Monitor With Watchdog Timer

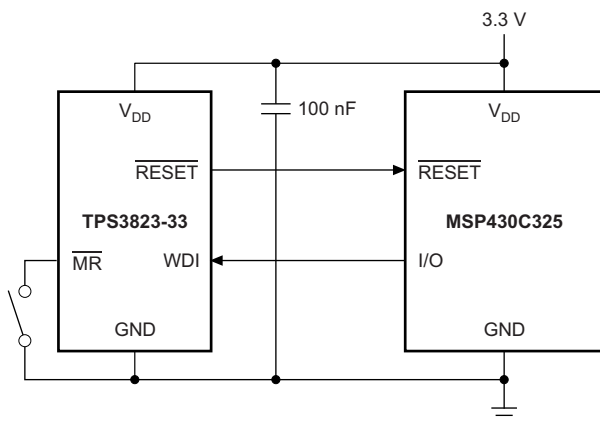

1 Features

- Power-On reset generator with fixed delay time of 200 ms (TPS3823/4/5/8) or 25 ms (TPS3820)
- Manual reset input (TPS3820/3/5/8)
- Reset output available in active-low (TPS3820/3/4/5), active-high (TPS3824/5), and open drain (TPS3828)
- Supply voltage supervision range: 2.5 V, 3 V, 3.3 V, 5 V
- Watchdog timer (TPS3820/3/4/8)
- Supply current of 15 μ A (Typical)
- 5-Pin SOT-23 package
- Temperature range: -40°C to 85°C (-40°C to 125°C for TPS3823A-33)

2 Applications

Typical Application Schematic

3 Description

The TPS382x family of supervisors provide circuit initialization and timing supervision, primarily for DSP and processor-based systems. During power on, $\overline{\text{RESET}}$ asserts when the supply voltage V_{DD} becomes greater than 1.1 V. Thereafter, the supply voltage supervisor monitors V_{DD} and keeps $\overline{\text{RESET}}$ active low as long as V_{DD} remains less than the threshold voltage, $V_{\text{IT-}}$. An internal timer delays the return of the output to the inactive state (high) to ensure proper system reset. The delay time, t_{d} , starts after V_{DD} has risen above the threshold voltage ($V_{\text{IT-}} + V_{\text{HYS}}$). When the supply voltage drops below the threshold voltage $V_{\text{IT-}}$, the output becomes active (low) again. No external components are required. All the devices of this family have a fixed-sense threshold voltage, $V_{\text{IT-}}$, set by an internal voltage divider. The TPS382x family also offers watchdog time out options of 200 ms (TPS3820) and 1.6 s (TPS3823/4/8).

Device Information⁽¹⁾

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPS382x	SOT-23 (5)	2.90 mm x 1.60 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

4 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision L (January 2018) to Revision M	Page
• Added Operating free-air, T_A for TPS3823A-33 only	5
• Added Electrical Characteristics for TPS3823A-33 only Table	7
• Added new typical performance curves figure 9 through 26	10

Changes from Revision K (November 2015) to Revision L	Page
• Changed the $\overline{\text{RESET}}$ columns for the TPS3824 and TPS3828 devices.....	4
• Removed 'Open-drain' from the RESET column for the TPS3828 device.....	4
• Changed text in the $\overline{\text{MR}}$ pin description from: RESET to: $\overline{\text{RESET}}$	4

Changes from Revision J (April 2013) to Revision K	Page
• Added <i>ESD Ratings</i> table, <i>Feature Description</i> section, <i>Device Functional Modes</i> , <i>Application and Implementation</i> section, <i>Power Supply Recommendations</i> section, <i>Layout</i> section, <i>Device and Documentation Support</i> section, and <i>Mechanical, Packaging, and Orderable Information</i> section	1
• Changed front-page figure.....	1
• Changed <i>Pin Configuration and Functions</i> section; updated table format.....	4
• Changed "free-air temperature" to "junction temperature" in <i>Absolute Maximum Ratings</i> condition statement	5
• Deleted <i>Soldering temperature</i> specification from <i>Absolute Maximum Ratings</i> table.....	5
• Changed <i>clamp current</i> to <i>current</i> specifications in <i>Absolute Maximum Ratings</i> table	5
• Changed Removed V_I from <i>Absolute Maximum Ratings</i> table	5
• Changed Removed V_{SENSE} from <i>Recommended Operating Conditions</i> table.....	5
• Changed free-air temperature to junction temperature in <i>Electrical Characteristics</i> condition statement.....	6
• Changed " T_A " to " T_J " in <i>Timing Requirements</i> condition statement	7
• Changed " T_A " to " T_J " in <i>Switching Characteristics</i> condition statement	7

• Added footnote (3) to <i>Functional Block Diagram</i>	14
• Changed part number shown in Figure 27	16
• Changed Figure 29	18

Changes from Revision I (February 2013) to Revision J **Page**

• Added TPS382xA-33 to second $\overline{\text{RESET}}$ row of V_{OH} parameter in <i>Electrical Characteristics</i> table	6
• Added TPS382xA-33 to third $\overline{\text{RESET}}$ row of V_{OL} parameter in <i>Electrical Characteristics</i> table	6
• Corrected typo in V_{OL} $\overline{\text{RESET}}$ parameter test conditions	6
• Added TPS382xA-33 to third and seventh rows of V_{IT-} parameter in <i>Electrical Characteristics</i> table	6
• Added TPS382xA-33 to third row of V_{hys} parameter in <i>Electrical Characteristics</i> table	6
• Added TPS382xA-33 to third row of I_{OS} parameter in <i>Electrical Characteristics</i> table	7
• Added TPS3823A to second row of t_{out} parameter in <i>Switching Characteristics</i> table	7
• Added TPS3823A to second row of t_d parameter in <i>Switching Characteristics</i> table	7
• Added TPS3823A to first row of t_{PHL} parameter in <i>Switching Characteristics</i> table	8

Changes from Revision H (July 2012) to Revision I **Page**

• Added last row of <i>Terminal Functions</i> table to Package Information table	4
--	---

Pin Functions

NAME	PIN			I/O	DESCRIPTION
	TPS3820, TPS3823, TPS3823A, TPS3828	TPS3824	TPS3825		
GND	2	2	2	—	Ground connection
$\overline{\text{MR}}$	3	—	4	I	Manual-reset input. Pull low to force a reset. $\overline{\text{RESET}}$ remains low as long as $\overline{\text{MR}}$ is low and for the time-out period after $\overline{\text{MR}}$ goes high. Leave unconnected or connect to V_{DD} when unused.
RESET	—	3	3	O	Active-high reset output. Either push-pull or open-drain output stage.
$\overline{\text{RESET}}$	1	1	1	O	Active-low reset output. Either push-pull or open-drain output stage.
V_{DD}	5	5	5	I	Supply voltage. Powers the device and monitors its own voltage.
WDI	4	4	—	I	Watchdog timer input. If WDI remains high or low longer than the time-out period, then reset is triggered. The timer clears when reset is asserted or when WDI sees a rising edge or a falling edge. If unused, the WDI connection must be high impedance to prevent it from causing a reset event.

7 Specifications

7.1 Absolute Maximum Ratings

over operating junction temperature range (unless otherwise noted)^{(1) (2)}

		MIN	MAX	UNIT
Voltage	V _{DD}	-0.3	6	V
	RESET, $\overline{\text{RESET}}$, MR, WDI	-0.3	(V _{DD} + 0.3)	
Current	Maximum low output, I _{OL}	-5	5	mA
	Maximum high output, I _{OH}	-5	5	
	Output range (V _O < 0 or V _O > V _{DD}), I _{OK}	-10	10	
Continuous total power dissipation		See Thermal Information		
Temperature	Operating free-air, T _A	-40	85	°C
	Operating free-air, T _A for TPS3823A-33 only	-40	125	
	Storage, T _{stg}	-65	150	

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values are with respect to GND.

7.2 ESD Ratings

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 ⁽¹⁾	±2000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾	±500	

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
- (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 Recommended Operating Conditions

over operating junction temperature range (unless otherwise noted).

		MIN	NOM	MAX	UNIT
V _{DD}	Supply voltage	1.1		5.5	V
V _{IH}	High-level input voltage at $\overline{\text{MR}}$ and WDI	0.7 × V _{DD}			V
V _{IL}	Low-level input voltage			0.3 × V _{DD}	V
Δt/ΔV	Input transition rise and fall rate at $\overline{\text{MR}}$ or WDI			100	ns/V
T _A	Operating free-air temperature	-40		85	°C
T _A	Operating free-air temperature for TPS3823A-33 only	-40		125	°C

7.4 Thermal Information

THERMAL METRIC ⁽¹⁾		TPS382x	UNIT
		DBV (SOT-23)	
		5 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	209.1	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	72.8	°C/W
R _{θJB}	Junction-to-board thermal resistance	36.7	°C/W
ψ _{JT}	Junction-to-top characterization parameter	2.1	°C/W
ψ _{JB}	Junction-to-board characterization parameter	35.8	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report (SPRA953).

8 Detailed Description

8.1 Overview

The TPS382x family of supervisors provide circuit initialization and timing supervision. Optional configurations include devices with active-high and active-low output signals (TPS3824/5), devices with a watchdog timer (TPS3820/3/4/8), and devices with manual reset ($\overline{\text{MR}}$) pins (TPS3820/3/5/8). $\overline{\text{RESET}}$ asserts when the supply voltage, V_{DD} , rises above 1.1 V. For devices with active-low output logic, the device monitors V_{DD} and keeps $\overline{\text{RESET}}$ low as long as V_{DD} remains below the negative threshold voltage, $V_{\text{IT-}}$. For devices with active-high output logic, $\overline{\text{RESET}}$ remains high as long as V_{DD} remains below $V_{\text{IT-}}$. An internal timer delays the return of the output to the inactive state (high) to ensure proper system reset. The delay time, t_{d} , starts after V_{DD} rises above the positive threshold voltage ($V_{\text{IT-}} + V_{\text{HYS}}$). When the supply voltage drops below $V_{\text{IT-}}$, the output becomes active (low) again. All the devices of this family have a fixed-sense threshold voltage, $V_{\text{IT-}}$, set by an internal voltage divider, so no external components are required.

The TPS382x family is designed to monitor supply voltages of 2.5 V, 3 V, 3.3 V, and 5 V. The devices are available in a 5-pin SOT-23 package and are characterized for operation over a temperature range of -40°C to 85°C . Only TPS3823A-33 is characterized for operation over a temperature range -40°C to 125°C .

8.3 Feature Description

8.3.1 Manual Reset ($\overline{\text{MR}}$)

The $\overline{\text{MR}}$ input allows an external logic signal from processors, logic circuits, and/or discrete sensors to force a reset signal regardless of V_{DD} with respect to $V_{\text{IT-}}$ or the state of the watchdog timer. A low level at $\overline{\text{MR}}$ causes the reset signals to become active.

8.3.2 Active-High or Active-Low Output

All TPS382x devices have an active-low logic output ($\overline{\text{RESET}}$), while the TPS3824/5 devices also include an active-high logic output (RESET).

8.3.3 Push-Pull or Open-Drain Output

All TPS382x devices, except for TPS3828, have push-pull outputs. TPS3828 devices have an open-drain output.

Feature Description (continued)

8.3.4 Watchdog Timer (WDI)

The TPS3820, TPS3823, TPS3824, and TPS3828 devices have a watchdog timer that must be periodically triggered by either a positive or negative transition at WDI to avoid a reset signal being issued. When the supervising system fails to retrigger the watchdog circuit within the time-out interval, t_{out} , $\overline{\text{RESET}}$ becomes active for the time period t_d . This event also reinitializes the watchdog timer.

The watchdog timer can be disabled by disconnecting the WDI pin from the system. If the WDI pin detects that it is in a high-impedance state, the TPS3820, TPS3823, TPS3824, or TPS3828 will generate its own WDI pulse to ensure that $\overline{\text{RESET}}$ does not assert. If this behavior is not desired, place a 1-k Ω resistor from WDI to ground. This resistor will help ensure that the TPS3820, TPS3823, TPS3824, or TPS3828 detects that WDI is not in a high-impedance state.

In applications where the input to the WDI pin is active (transitioning high and low) and the TPS3820, TPS3823, TPS3824, or TPS3828 is asserting $\overline{\text{RESET}}$, $\overline{\text{RESET}}$ is stuck at a logic low after the input voltage returns above V_{IT} . If the application requires that input to WDI be active when the reset signal is asserted, then either the **A** version of the device or a FET should be used to decouple the WDI signal. The **A** version does not latch the reset signal to the asserted state if a WDI pulse is received while $\overline{\text{RESET}}$ is asserted. An external FET decouples the WDI signal by disconnecting the WDI input when $\overline{\text{RESET}}$ is asserted. For more details on this, see [Decoupling WDI During Reset Event](#). The **A** version of the device does not require this FET, but it does operate in circuits that have it. Therefore, the **A** version is backwards-compatible with the non-**A** versions.

8.4 Device Functional Modes

Table 1 lists the functional modes of the TPS382x devices.

Table 1. Function Table

INPUTS		OUTPUTS	
$\overline{\text{MR}}$ (1)	$V_{\text{DD}} > V_{\text{IT}}$	$\overline{\text{RESET}}$	$\text{RESET}^{(2)}$
L	0	L	H
L	1	L	H
H	0	L	H

(2) TPS3824/5

9 Application and Implementation

NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TPS382x family of devices are very small supervisory circuits that monitor fixed supply voltages of 2.5 V, 3 V, 3.3 V, and 5 V. The TPS382x family operates from 1.1 V to 5.5 V. Orderable options include versions with either push-pull or open-drain outputs, versions that use active-high or active-low logic for output signals, versions with a manual reset pin, and versions with a watchdog timer. See the [Device Comparison Table](#) for an overview of device options.

9.2 Typical Applications

9.2.1 Supply Rail Monitoring With Watchdog Time-Out and 200-ms Delay

The TPS3823A can be used to monitor the supply rail for devices such as microcontrollers. The downstream device is enabled by the TPS3823A once the voltage on the supply pin (V_{DD}) is above the internal threshold voltage ($V_{IT+} + V_{HYS}$). The downstream device is disabled by the TPS3823A when V_{DD} falls below the threshold voltage minus the hysteresis voltage (V_{IT-}). The TPS3823A also issues a reset signal if the WDI input is not periodically triggered by a positive or negative transition at WDI. When the supervising system fails to retrigger the watchdog circuit within the time-out interval, t_{out} , \overline{RESET} becomes active for the time period t_d .

Some applications require a shorter reset signal than the 200 ms that most of the TPS382x family provide. In these cases, the TPS3820 is a good choice because it has a delay time of only 25 ms. If an open-drain output is required, replace the TPS3823A with the TPS3828 (if the WDI input must be active while \overline{RESET} is low, see [Decoupling WDI During Reset Event](#)). [Figure 27](#) shows the TPS3823A in a typical application.

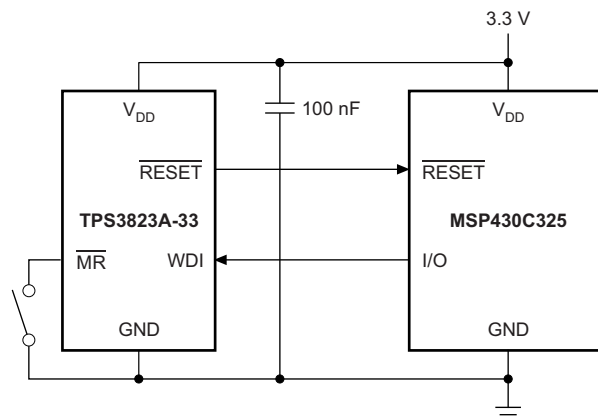

Figure 27. Supply Rail Monitoring With Watchdog Time-Out

9.2.1.1 Design Requirements

The TPS3823A must drive the enable pin of a MSP430C325 using a logic-high signal to signify that the supply voltage is above the minimum operating voltage of the device and monitor the I/O pin to determine if the microcontroller is operating correctly.

Typical Applications (continued)

9.2.1.2 Detailed Design Procedure

Determine which version of the TPS382x family best suits the functional performance required.

If the input supply is noisy, include an input capacitor to help avoid unwanted changes to the reset signal.

9.2.1.3 Application Curve

Figure 28. Minimum Pulse Duration at V_{DD} vs V_{DD} Threshold Overdrive

Typical Applications (continued)

9.2.2 Decoupling WDI During Reset Event

If the application requires that the input to WDI is active when the reset signal is asserted and the **A** version of the device cannot be used, Figure 29 shows how to decouple WDI from the active signal using an N-channel FET. The N-channel FET is placed in series with the WDI pin, with the gate of the FET connected to the RESET output.

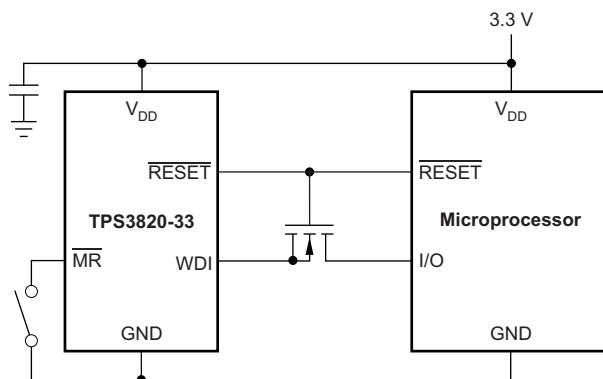

Figure 29. WDI Example

9.2.2.1 Design Requirements

The TPS3820 must drive the enable pin of a microprocessor using a logic-high signal to signify that the supply voltage is above the minimum operating voltage of the device and monitor the I/O pin to determine if the microcontroller is operating correctly. The reset signal delay time should be greater than 10 ms but less than 50 ms to achieve the desired behavior.

9.2.2.2 Detailed Design Procedure

Determine which version of the TPS3820 is best suited for monitoring the supply voltage.

If the input supply is noisy, include an input capacitor to help avoid unwanted changes to the reset signal.

9.2.2.3 Application Curve

Figure 30. Minimum Pulse Duration at V_{DD} vs V_{DD} Threshold Overdrive

10 Power Supply Recommendations

These devices are designed to operate from an input supply with a voltage range from 1.1 V to 5.5 V. Though not required, it is good analog design practice to place a 0.1- μ F ceramic capacitor close to the V_{DD} pin if the input supply is noisy.

11 Layout

11.1 Layout Guidelines

Follow these guidelines to lay out the printed-circuit board (PCB) that is used for the TPS382x family of devices.

- Place the V_{DD} decoupling capacitor (C_{VDD}) close to the device.
- Avoid using long traces for the V_{DD} supply node. The V_{DD} capacitor (C_{VDD}), along with parasitic inductance from the supply to the capacitor, can form an LC tank and create ringing with peak voltages above the maximum V_{DD} voltage.

11.2 Layout Example

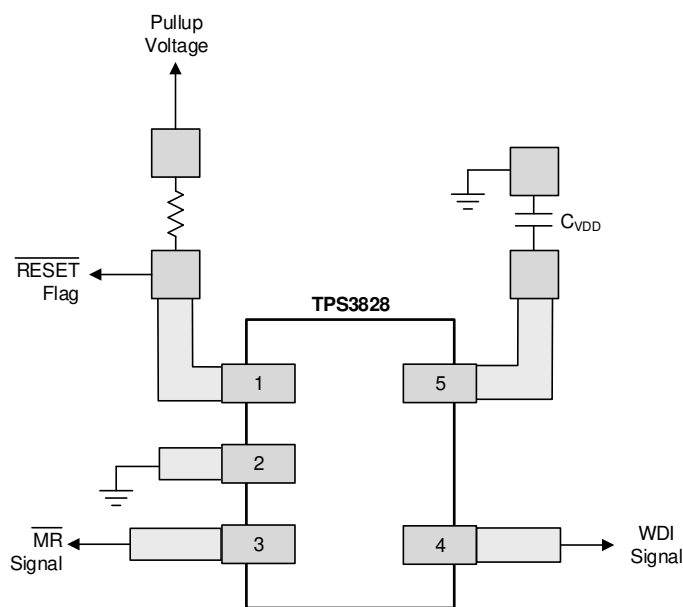

Figure 31. Example Layout (DBV Package)

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

DBV0005A

PACKAGE OUTLINE

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

4214839/F 06/2021

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. Reference JEDEC MO-178.
4. Body dimensions do not include mold flash, protrusions, or gate burrs. Mold flash, protrusions, or gate burrs shall not exceed 0.25 mm per side.

EXAMPLE BOARD LAYOUT

DBV0005A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

LAND PATTERN EXAMPLE
EXPOSED METAL SHOWN
SCALE:15X

SOLDER MASK DETAILS

4214839/F 06/2021

NOTES: (continued)

- 5. Publication IPC-7351 may have alternate designs.
- 6. Solder mask tolerances between and around signal pads can vary based on board fabrication site.

EXAMPLE STENCIL DESIGN

DBV0005A

SOT-23 - 1.45 mm max height

SMALL OUTLINE TRANSISTOR

SOLDER PASTE EXAMPLE
BASED ON 0.125 mm THICK STENCIL
SCALE:15X

4214839/F 06/2021

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.
